I never shy away from the challenge of delivering a complex web system on time and on budget. Web design and development is not just a job for me. It's a favourite hobby and an object of passion that I happen to be paid for.

I'm an advocate for open web, accessible to all people, irrespective of the browser they use, how skilful they are with computers, or any disability they may have. I bring this ethos to every project, helping clients reach their audience, be heard and understood.

Experience

Lead web developer and interaction designer – Colour & Thing *December 2013 – December 2015*
html, css, less, gulp, php, mysql, wordpress, user-experience, user-testing

As my interest in working with startups dwindled, I decided to focus on client services sector and further improve my skills as a designer. Working at *Colour & Thing* (http://colourandthing.com) not only enabled me to work with a great variety of clients, but also helped me develop leadership skills, understand marketing and branding aspects of design. Our team got Gold at Heist Awards 2014 for *Arts University Bournemouth* (http://aub.ac.uk) website and Silver for their *'Who Are You?'* (http://way.aub.ac.uk) campaign; we helped *Martin Boroson* (http://martinboroson.com/) express his personality and business proposition; we also helped implement SME tools and information repository for *Bristol 2015 – European Green Capital* (https://www.bristol2015.co.uk) program.

Web developer and interaction designer – Hex Collective *June 2010 – November 2013*
html, css, php, mysql, modx, user-experience, responsive-design, mobile, codeigniter

Having worked with Hex Collective on several projects before, I was offered a permanent position as a developer and interaction designer, and migrated to United Kingdom in 2010. I was building websites, big and and small, for companies like *BSM* (http://www.bsm.co.uk/), *TrakCel* (https://trakcel.com/), *Linux IT* (http://www.linuxit.com/); I also designed and developed (now defunct) websites and apps for a few startups: most notably GroupOut (party sharing website) and Comono (an event management app).

Web developer – Freelance *January 2005 – May 2010*
html, css, codeigniter, php, mysql

By the time I graduated university, I had already built a few of websites and had been quite enjoying the rapidly changing field of web development. I mostly worked remotely as a contractor during this period. Among other things, I was lead front-end developer on projects for forward thinking design brands such as *YouHeShe* (http://www.youheshe.com/) and *Normann Copenhagen* (http://www.normann-copenhagen.com/); I cut my teeth at back-end development working with several startups, the most successful being *VoucherCloud* (https://www.vouchercloud.com/), where I was responsible for API design, and implementation of data management and analytics tools.

Education

Specialist in Economics – Altai State Technical University *2000 – 2005*
economics, management, marketing, english, relational-database, networking

As I'd been already programming since a young age, I decided to broaden my knowledge about the world, and study economics, management, marketing, business administration, accounting, and finance. As it was a technical university, it enabled me to sit in on computer science lectures as well, and learn about database normalization, graph theory, network protocols, and other subjects I still find use for to this day.

Projects & Interests

GitHub - order.less – https://github.com/chromice/order.less *December 2013 - February 2016*
css, less, javascript
Baseline alignment, column grids and modular scales.

A library of Less mixins for managing complex CSS layouts using column grids with fixed gutters, baseline alignment, and strong typographic contrast.

GitHub - ae – https://github.com/chromice/ae *June 2011 - March 2016*
php, sql, javascript
Simple PHP framework

A bunch of PHP libraries for request routing, response caching, form validation, image processing, database access, profiling, and debugging.

GitHub - timelier.app – https://github.com/chromice/timelier.app   *February 2016 - March 2016*
javascript, backbone.js, osx

A time tracking app... because the world needed another one!

A simple time tracking app I built for myself, when I could not find one that satisfied my seemingly basic needs.

Background

In my spare time I can often be found playing games, making music, editing videos, dancing, or enjoying long walks around the city.
